

DWFritz Automation Launches Global Build-to-Print Business Segment

Clients can scale their manufacturing efficiencies by utilizing the company's world-class supply chain and manufacturing engineering competencies

WILSONVILLE, OR, Oct. 9, 2019 – DWFritz Automation, a leading global provider of high-speed, precision automation and metrology solutions, announced the launch of its Build-to-Print (BTP) business segment. The new service offering makes manufacturing partnerships available to clients with a viable engineering design, but without the manufacturing infrastructure or capacity to bring that design to life.

“We are excited to bring this service offering to our clients by leveraging our vast experience in advanced manufacturing and automation across a number of industry verticals”, said Mike Fritz, CEO of DWFritz. “Since 1973, the company has been delivering precision automation solutions that solve the most difficult manufacturing and quality challenges. Our new Build-to-Print service brings that experience and expertise to contract manufacturing for engineered designs, where partners can benefit from our global supply chain partnerships, configuration management capabilities, MRP-driven inventory controls, and more”.

DWFritz Automation’s world-class technician and manufacturing engineering teams can not only bring to life the engineering designs of our clients, but also can provide expertise in reviewing bill of materials and drawings, recommend alternate sources of component supply, and suggest design improvements to improve manufacturability and throughput.

By collaborating with DWFritz, clients can optimize their manufacturing capacity, manage internal resources, and control their fixed internal production costs and inventory. With a strong commitment to quality and exceptional service, the company can rapidly scale manufacturing from single unit builds to higher volumes. Our facilities include 80,000 square feet of production space, 56,000 square feet of flexible build space, 11,000 square feet of secure manufacturing space, calibration and engineering labs, ITAR capabilities and a 2,000 square foot cleanroom that allows for manufacturing at scale.

About DWFritz Automation

DWFritz Automation, based in Wilsonville, Oregon, USA, is a leading global provider of high-precision automation solutions for advanced high-volume manufacturing. The Company provides world-class build-to-print manufacturing capabilities to clients, in addition to designing, building, and supporting engineered-to-order automation systems and high-speed, non-contact metrology products.
